

Dear Reviewers;

To test the proposed algorithm, we suggest reviewers to consider the following points:

- 1) Please download the source code of the proposed algorithm which has been written in Matlab2014b from the link: <http://enginsoft.ir/Implementation.rar>
- 2) We implemented the proposed technique on five real world tumor datasets that contained in the above source code.
- 3) After running the source code (main.m file), you must select a number of datasets to gain the expected results.
- 4) After passing some minutes (i.e., it depends on the hardware configurations of the computer), the results (reduct size and accuracy) will be shown.

Best Regards,

Seyedeh Faezeh Farahbakhshian
